

PLECTERE

ACOUSTIC TEXTILE DESIGN

studio petra vonk

The acoustic measurements on the PLECTERE were performed according to the DIN-EN-ISO 354.

The measurements revealed that the PLECTERE offers medium to high absorbance in the medium and high frequency range.

Despite its transparency, PLECTERE reduces disturbing high frequency noise from nearby working areas by 25%. PLECTERE thereby improves the acoustical comfort considerably.

The efficiency of PLECTERE to absorb sound is almost independent of the distance to the wall, leading to greater freedom for the interior designer.
